JAYPEE HEALTH TIMES

Life after surviving a heart attack

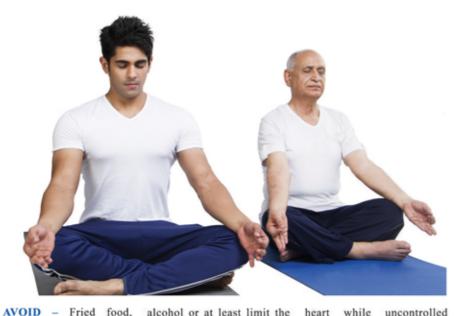

A ccording to doctors, a heart attack survivor is always at a risk of getting another attack. People who survive heart attacks, for them a post-attack care becomes very important. Often the lack of proper post-treatment care can become fatal. If experts are to be believed then adopting a healthy lifestyle along with proper post-treatment care can save you from another nightmare.

When it comes to post-treatment care the most important thing is proper medication. Drug therapy is imperative after a heart attack. Drugs prescribed to patient depends on a lot of factors like diabetes and blood pressure. Apart from correct medication, simple lifestyle changes consuming healthy food and regular cardio exercises, can also help you reduce the risk

of another attack. Following these simple steps can help combat the risk of another attack and also can strengthen their heart:

FOOD TO BE

CONSUMED - Fruits, vegetables and fiber-rich food. Foods rich in anti-oxidants, fiber, vitamins and minerals are good for the

processed meat, sugar and high fat dairy products. EXERCISE - Do regular cardio exercises and yoga.

Exercise increases the oxygen in blood and facilitates smooth circulation

STRESS - Avoid stress at all cost. Relax, rewind and mediate. Chronic stress exposes our organs to stress hormones like cortisol and adrenaline which is not good for the heart.

alcohol or at least limit the intake. Exceeding the limit of alcohol contributes to the rise in triglycerides, it increases your heartbeat and can raise your blood pressure.

SMOKING - Smoking reduces oxygen cells in the bloodstream and cause clot formation. Thus increasing

the chances of a sudden

pressure causes strain on the

cardiac attack. BLOOD PRESSURE AND DIABETES-Check regularly. High blood

diabetes damages the nerves and blood vessels.

heart while uncontrolled

DOCTOR-When in doubt always consult a doctor. Your doctor can help you erase the health mistakes of the past. While also assisting you to gradually ease back into your daily routine.

Food for a healthy heart

ur eating habits and diet directly influence our body functions. The health of our heart often depends on the food that we consume. The main enemies of the heart are cholesterol, stress and any chronic disorder like high blood pressure or diabetes. Correct nutrition often many prevents heart problems. When it comes to your heart, only food that contains essential and vital nutrients should

What food should you eat to maintain a healthy heart? WHOLE GRAINS

consumed.

Insoluble fiber from whole grains not only extracts the unnecessary cholesterols and DARK CHOCOLATE

fats from the blood stream but also excretes it out. Food like dalia (cracked wheat), quinoa, oatmeal and whole-wheat bread are good for your heart. Dark chocolates contain flavonols that are known to

improve blood flow. The

chocolate should be more

than 70% dark and should

contain no processed sugar or

palm oil.

TOMATOES Red, juicy tomatoes are good for your heart. They not only contain potassium but also are a source of lycopene, which helps in eliminating cholesterol from the blood

vessels

oranges are a good source of vitamin C, potassium, fiber, folate and vitamin B. These nutrients help lower the risk of a heart disease. BERRIES

Strawberries, indian gooseberry, blueberries and

dants. They are known to lower the risk of heart diseases and are also good for brain

CITRUS FRUITS Fruits like sweet lemon, lemon and grapefruit and These vegetables are also rich in iron, calcium, fibers and antioxidants.

functions. A bowl full of berries along with your daily breakfast can work wonders for your heart. GREEN LEAFY VEGE -TABLES High in carotenoids, these vegetables help in eliminating toxins from the blood.

> NUTS These are rich in vitamin E

The air you breathe might be harming your heart! done to the atmosphere.

he presence of harmful pollutants in the air has given rise to a number of health hazards. While air pollution is a problem that we have to face round the year, still it is the winters that make it worse. The dip in temperature makes the air heavy and the pollutants get condensed in the fog which leads to various breathing and respiratory disorders.

The air around us contains oxygen, nitrogen, carbon dioxide, greenhouse gases, vehicular emissions, particulate matter and much more. Research says that the air in cities contains sulphur dioxide (SO2) and nitrogen oxide (NO2) that comes from burning of fossil fuels. Effect on the heart

Just ten practices can keep the joint pain away from your life.

contain hyaluronic acid and synovial fluid that lubricates the bones and allows it to move without friction. However, over the years due to the constant movement, they become susceptible to wear and tear and as we grow older the chance of joint Joint pain is majorly experienced in the knees, shoulder, elbow, wrists, and back.

Injuries like fractures also exert strain on the joints and can cause joint pain.

oints don't just support our body weight but also facilitate our movements. Joints

Incorporating certain lifestyle changes like the following and adopting a system-

• Nutrition check For joint health, the pH balance has to be maintained in the body. Acidic food cause the lubricant in the joints to gradually dry up. Processed food and saturated fats should also be avoided. Alkaline food on the other hand help in increasing energy and reduce inflammation and are therefore good for your bones. Consuming papaya, apples, whole grains, milk, walnut and pumpkin seeds can significantly reduce the chances of joint pain. Foods rich in omega-3 fatty acids are also good for

A poor posture will cause muscle stiffness and improper blood flow in the bones. If your desk job involves sitting for long hours, ensure that you maintain a 90-110

Maintain good posture

atic therapy routine will help ease joint pain.

degree thigh bent with thighs completely supported by the chair, relaxed shoulders keep your feet flat on the floor, the chair backrest should support your lower back and the top of your computer screen should be at eye level.

If you are suffering from joint pain, physical therapy can ease the discomfort. The therapists follow a synchronized plan of joint and muscle movement along with heat packs that help release the tension

Control weight Reducing weight will lower the strain on the bones and joints. Maintaining healthy weight lowers the risk of lifestyle disorders.

Right footwear Our feet supports the entire body weight and therefore it is important that they get adequate support. A correct footwear should offer cushioning, support, stability,

and comfort to the feet, ankles and calf muscles. Take adequate rest Taking adequate rest is very important in case of a joint pain. Your joints will heal if you keep them still.

Increase flexibility

Supplement support

Stretching keeps our joints fit. It maintains the range of motion and strengthens the muscles. Take breaks from your workstation to stretch. Stiff joints are prone to inflammation and therefore it is important to keep them flexible. 3 Cold and warm therapy

Putting an ice pack on the area of pain will reduce swelling as the blood flow slows

down due to low temperature. On the other hand, warm water too helps in easing the

muscles. It improves blood circulation and provides a relaxing effect. Seek medication When it comes to joint pain, nothing can replace the importance of proper medication. One should always consult a doctor before taking any medication

D and calcium deficiency may weaken the bones. Make sure your diet has enough Joint concerns have a long-term impact. Regular check-ups, healthy diet and daily exercises can help you curb the pain before it becomes unbearable.

Joint pain can also arise due to deficiencies of certain vitamins or minerals. Vitamin

rare liver transplant surgery was performed recently by our Liver Transplant Depart-The transplant involved a 'Dual-Lobe-Liv-Transplant' on a Mongolian 38-year-old patient. The life saving surgery took around 16 hours and a team of India's best transplant surgeons.

in June, Purevsuren 38-year-old Dorj got to know about his liver ailment and was advised for a transplant surgery in October. However, the patient weighed 130 kgs, which made it impossible for him to survive if he were to receive the liver from just one person. After careful considerations, both his brothers aged 35 years and 31 years decided to donate a part of their liver to our patient. And that meant a

plant surgery. A procedure of Dual-Lobe-Liver transplant says, agreed to donate his liver. But

Senior Liver Transplant surgeon at Jaypee Hospital said, "it is a very rare surgery. In this surgery, liver from two donors is transplanted to one recipient. In normal cases, only a part of the liver from one donor is sufficient for the transplant. But in cases where the recipient is overweight or large in size, liver from one donor may not be sufficient to sustain the functions of the body. Hence,

Dr. Abhideep Chaudhary, a

hence it involves more complexities and challenges." Upon asking Purevsuren Dorj (the patient) said, "Prior to the surgery, my life was miserable because of my liver failure. After consulting with the doctors, I was informed Dual-Lobe-Liver Transthat I will have to undergo a liver transplant surgery, for which one of my brothers

me that I will require two donors for my transplant, I got really worried by the nature of the surgery. However, Dr. Chaudhary explained to me how the surgery will be performed and assured me that I will be back to leading a normal life post-surgery without any complications. I can't thank Dr. Abhideep Chaudhary and my brothers insuch cases, Dual-Lobe-Liv-Jaypee Hospital has given a er Transplant surgeries are done". He further added, " In

new lease of life to more than 100 people through liver Dual-Lobe-Liver Transplant transplants in the past one Surgery, three surgeries are year. The team of doctors performed simultaneously and have done many successful transplants of patients with critical medical histories and ABO-incompatible liver transplant is one of them. Now, with 'Dual-Lobe-Liver Transplant' surgery the doctors have again proved their medical expertise in the field and have added another feather in the crown for Jaypee Hospital.
